How to resize images using Microsoft Paint

I'm using Windows Vista but Paint is the almost the same in Windows Xp or older.

Open Paint: *Start> all programs> accessories* select "Paint" from the list

Go to File (top right) Select open and open a image

As you can see, the image is too big for the screen so we want to resize it so it can be uploaded to a website.

Select image> Resize/Skew

Then type the % value that you want the image to decrease by, (type in both the top two box's)

 Press ok and it's done.
